

CONFIDENTIAL • WEBSITE AUDIT & STRATEGY

Website **Analysis** & Strategy Report

Comprehensive audit of the existing digital presence, competitive benchmarking against Nefab, PageSpeed performance analysis, and a detailed roadmap for building a world-class enterprise web platform.

Project Requirements & Scope

Project Objective

Build a modern, high-performance corporate website for Econovus (Engineered Packaging Solutions) that represents the brand professionally, improves user experience and lead generation, and is easy to manage.

Website Pages (12)

- Home, About Us, Products / Solutions
- Industries Served, Technology, Sustainability
- Projects / Case Studies, Gallery, Blog / News
- Contact Us, Privacy Policy, Terms & Conditions

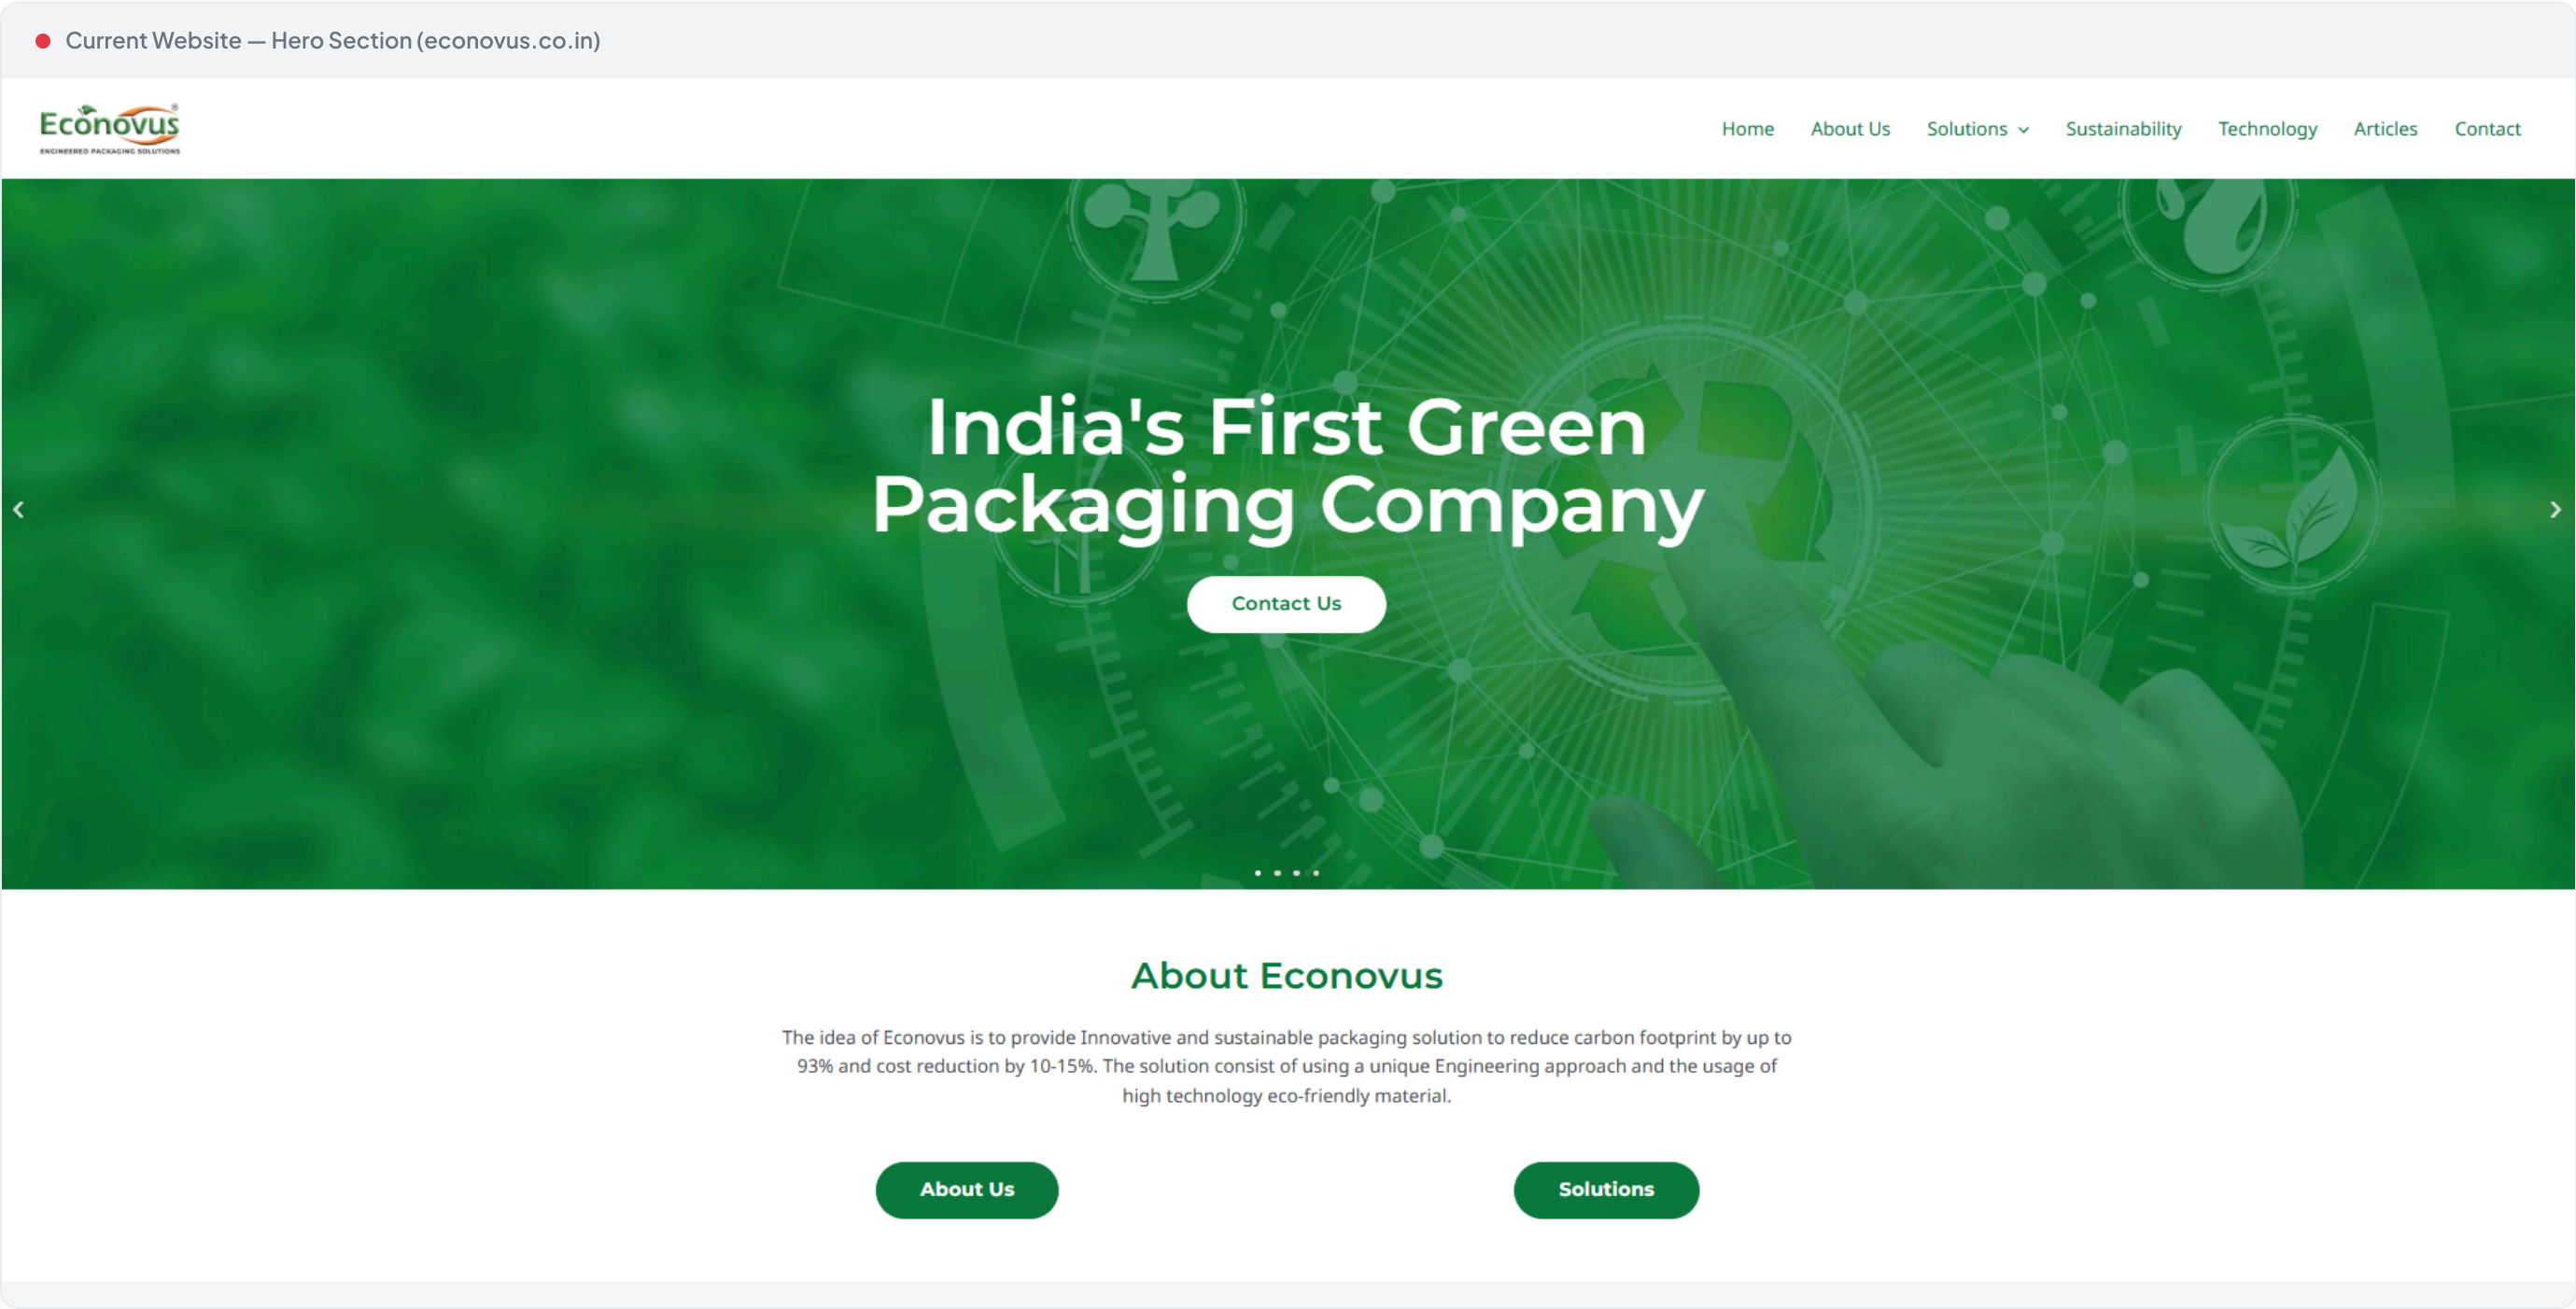

Core Features

- Premium responsive design, mobile & tablet optimized
- Performance-optimized architecture (SSR, metadata, schema)
- Dynamic contact form & blog management
- Custom admin panel + image/media management
- Google Maps & social media integration
- Analytics integration, security best practices
- Fast loading, cross-browser compatible
- Custom AI Chatbot (LangChain, RAG-based) — Q&A, appointment booking, lead capture

Existing Website Audit — Section-by-Section Critique

Below is a page-by-page analysis of the current Econovus website (econovus.co.in), using actual screenshots captured from the live site.

2.1 — Hero Section & Navigation

Generic Template Hero with Blurry Background

The hero uses a dark-green abstract background with generic eco-icons overlaid. No real product images, no engineering visuals, no sense of scale. Compare to Nefab which uses studio-quality photography of actual solutions in enterprise environments.

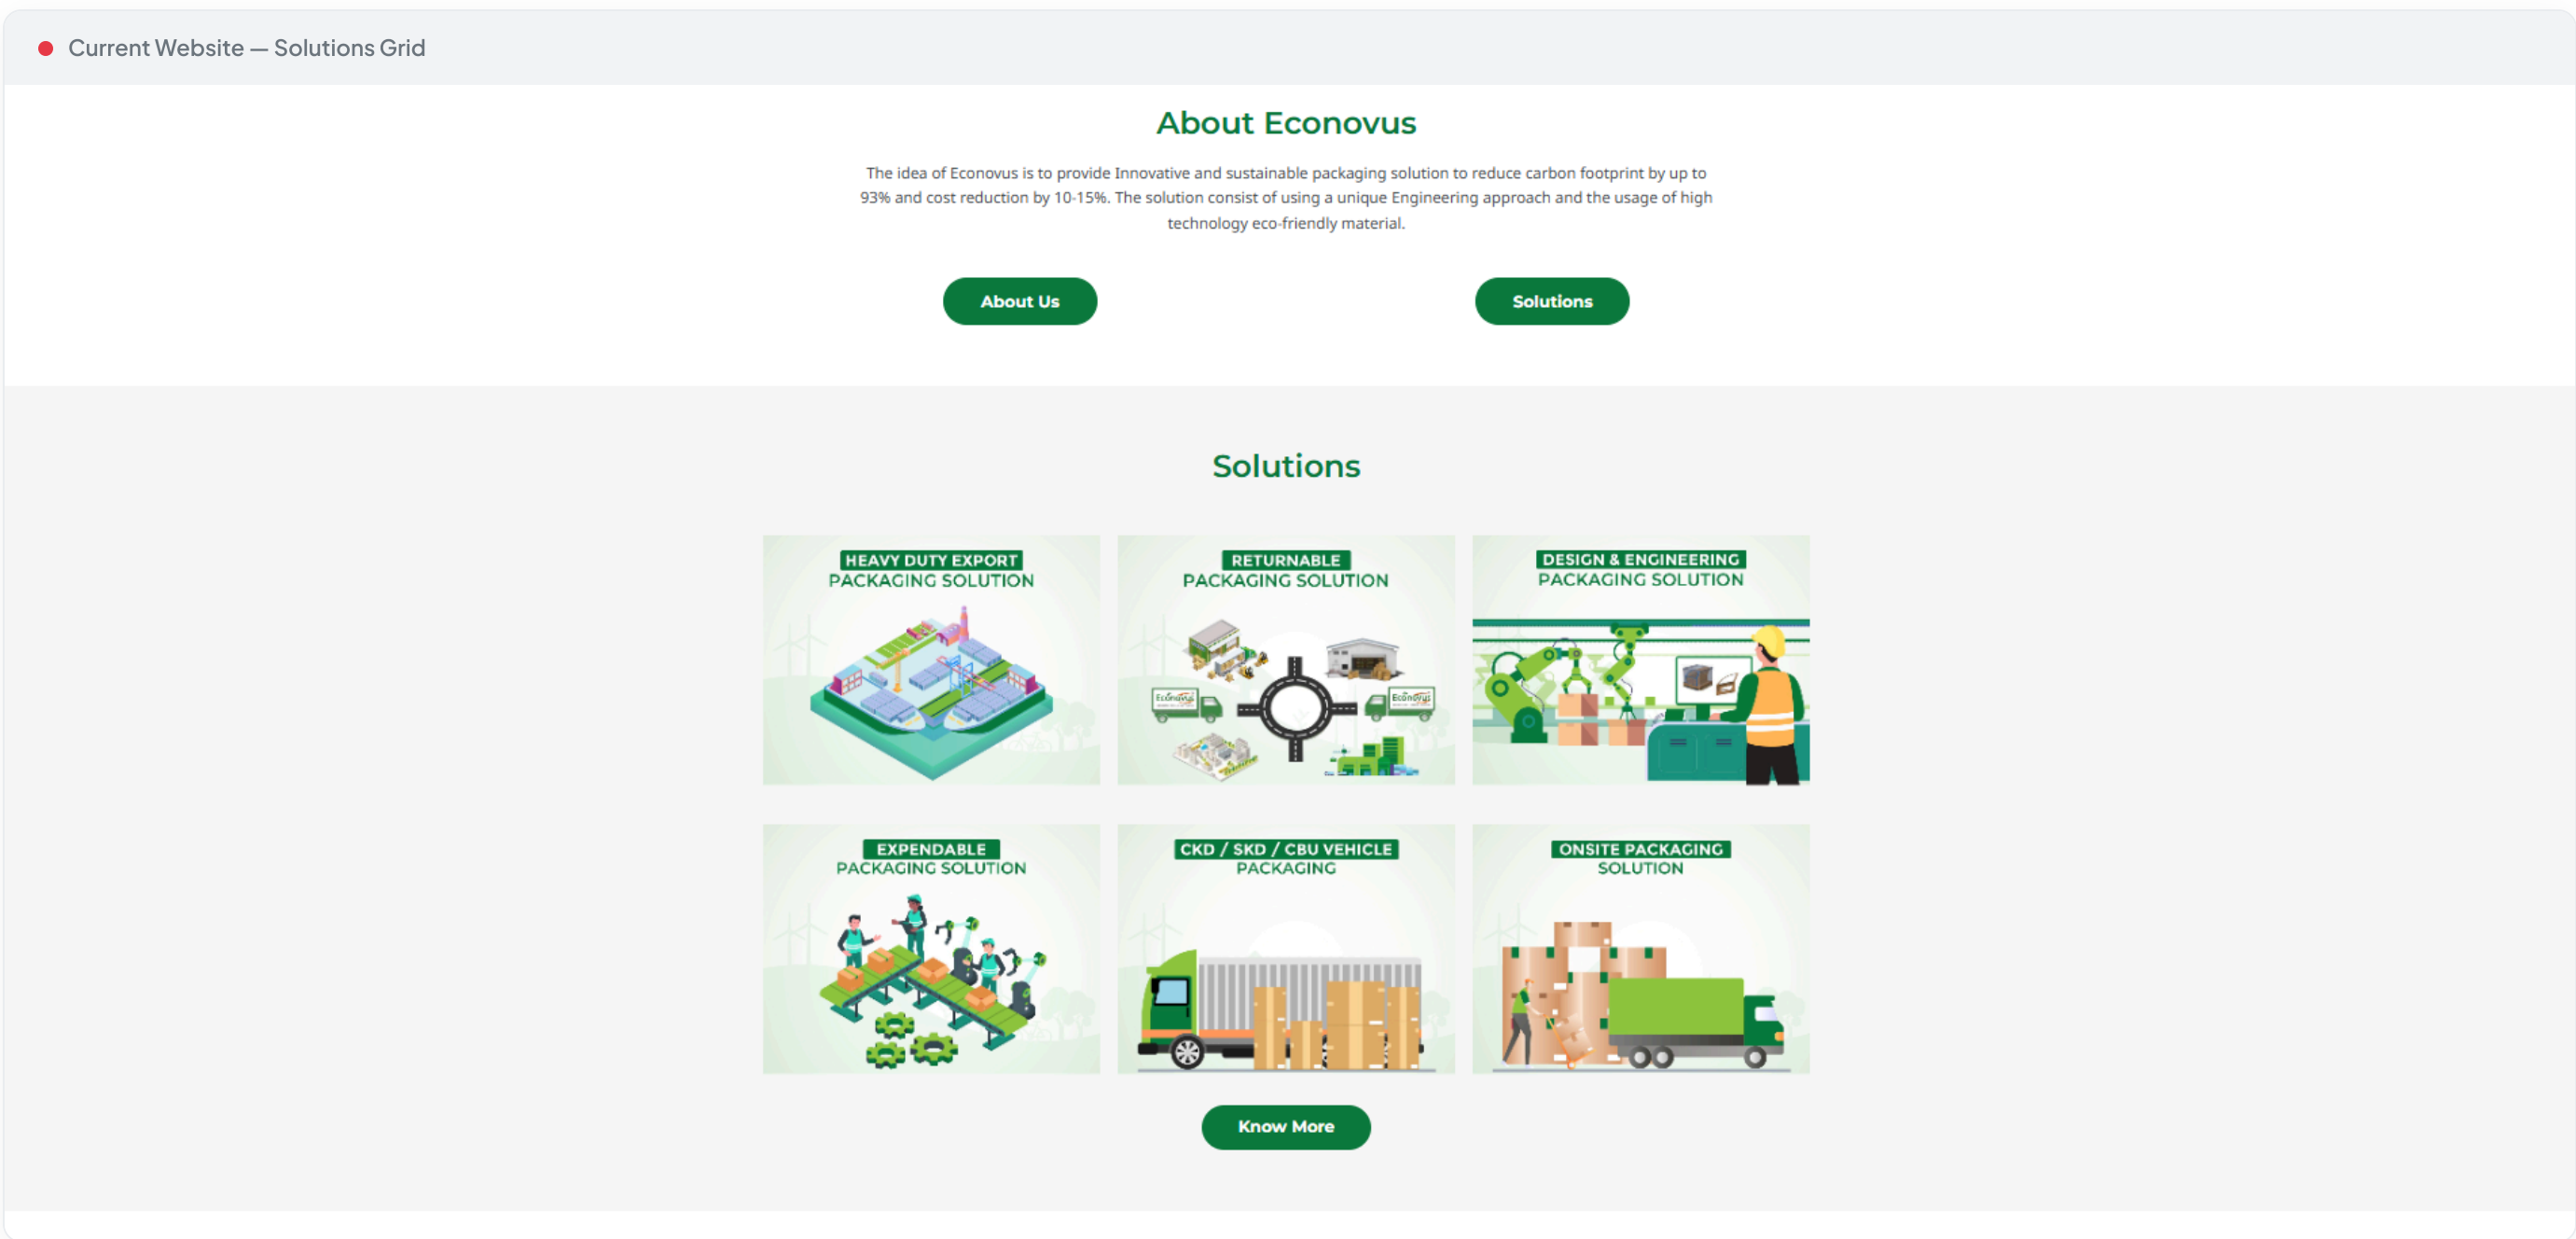

Navigation Lacks Industry Segmentation

The nav bar is flat and generic. There is no "Industries" dropdown — a Defence procurement officer or a Renewable Energy supply chain manager cannot find relevant content. Nefab segments by Telecom, Energy, Vehicles, etc.

Single, Weak CTA — "Contact Us"

No option to "Request a Quote," "Download a Case Study," or "Explore by Industry." This fails to capture different buyer intents at different stages of the B2B sales funnel.

2.2 — About & Solutions Section

Cartoon / Illustration-Based Imagery

Solutions are represented with flat, isometric vector illustrations. This is fundamentally wrong for a B2B enterprise selling 1-ton+ engineered packaging to OEMs like Stellantis and GM. It looks playful and consumer-grade, not industrial. Nefab uses real photography and 3D product renders.

No Visual Differentiation Between Solutions

All six solution cards look identical — same illustration style, same layout. There is no visual hierarchy to guide the user toward strategically important offerings like "Dangerous Goods / UN Certified" packaging.

Powerful Data Buried in Plain Text

"Reduce carbon footprint by up to 93% and cost reduction by 10–15%" is compelling data — but it's presented as a plain paragraph with zero visual emphasis. This should be front-and-center with bold metrics and animated counters.

2.3 — "Why Choose Econovus?" & Sustainability Band

● Current Website — Value Props & Green Section

Why Choose Econovus?

Bringing the best-in-class industrial packaging solution to you, Econovus is a packaging engineering company that stands out for its eco-friendly, innovative, cost-effective & smart catalogue of products

💡 Innovation & Technology

🌍 Sustainability

Value Propositions Are Just Labels

"Innovation & Technology," "Sustainability," "Industry 4.0," "Cost-effective," "Reliable & Safe" — listed as plain text badges with small icons. No statistics, no case study links, no expandable content. A Procurement Head needs proof, not bullet points.

Green Section Feels Unprofessional

The dark-green band with an embedded YouTube thumbnail is visually cluttered — the thumbnail has its own internal branding text creating redundancy. This critical credibility section should feature a premium video with interactive sustainability metrics, not a basic YouTube embed.

2.4 — Statistics & Contact Section

Generic Contact Form with No Lead Qualification

Basic Name/Email/Phone form with visible reCAPTCHA. No industry selector, no requirement type dropdown. B2B lead forms should qualify leads by asking for Company, Industry, and Requirement Type.

2.5 — Client Logos & Footer

Meet Our Clients

Econovus Engineered Packaging Solution

Econovus Packaging Solutions excels in terms of sustainability vision, eco-friendly solutions, core values, and operations; an one stop solution for all your industrial packaging needs. We are here to deliver expert packaging solutions & meet your sustainability goals as per your requirements. If you're rethinking your packaging strategy and are looking to partner with a like-minded supplier, Think Econovus!

Client Logo Slider Lacks Interactivity

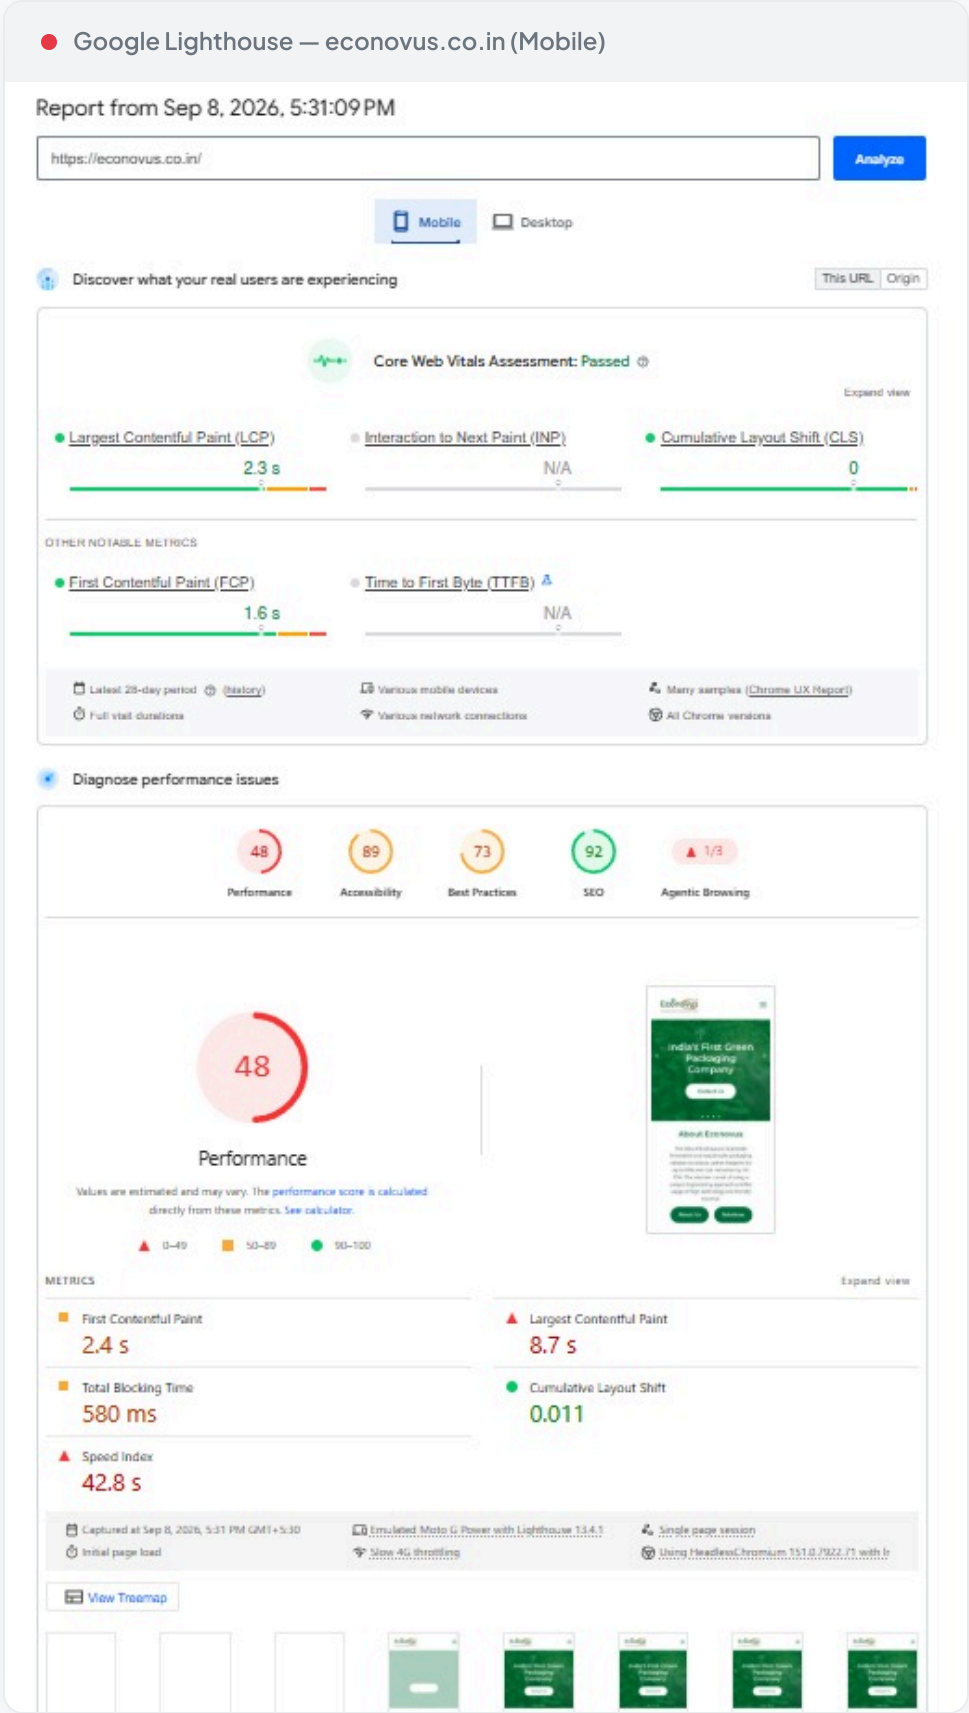

The client logos are placed in a basic automated slider without user controls. There are no interactive elements, hover states, or links to dedicated case studies, which limits user engagement and navigational flow.

PageSpeed & Performance Analysis

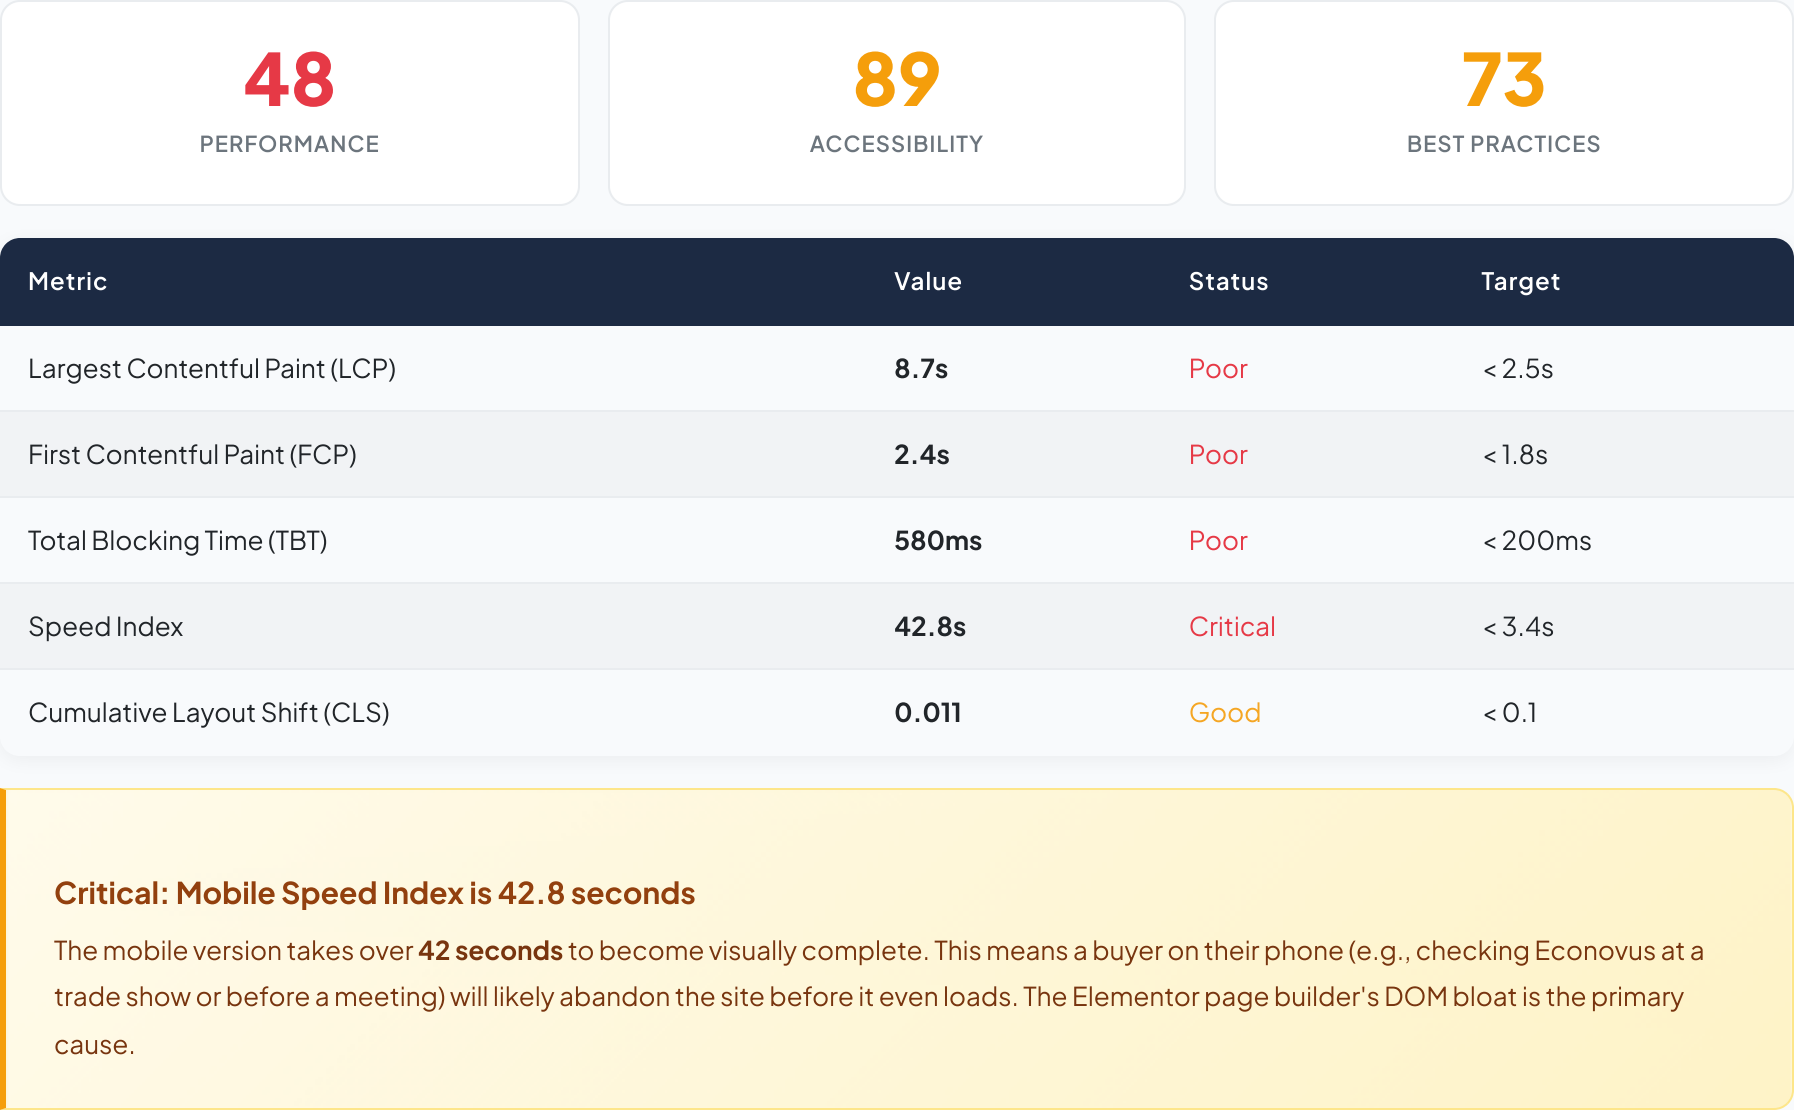

Google PageSpeed Insights was run on econovus.co.in on September 8, 2026. The results confirm serious performance issues on both Desktop and Mobile — directly impacting user experience, conversion rates, and brand credibility.

3.1 — Desktop Performance (Lighthouse Report)

3.5 — Nefab PageSpeed Comparison

Report from Sep 8, 2026, 4:58:56 PM

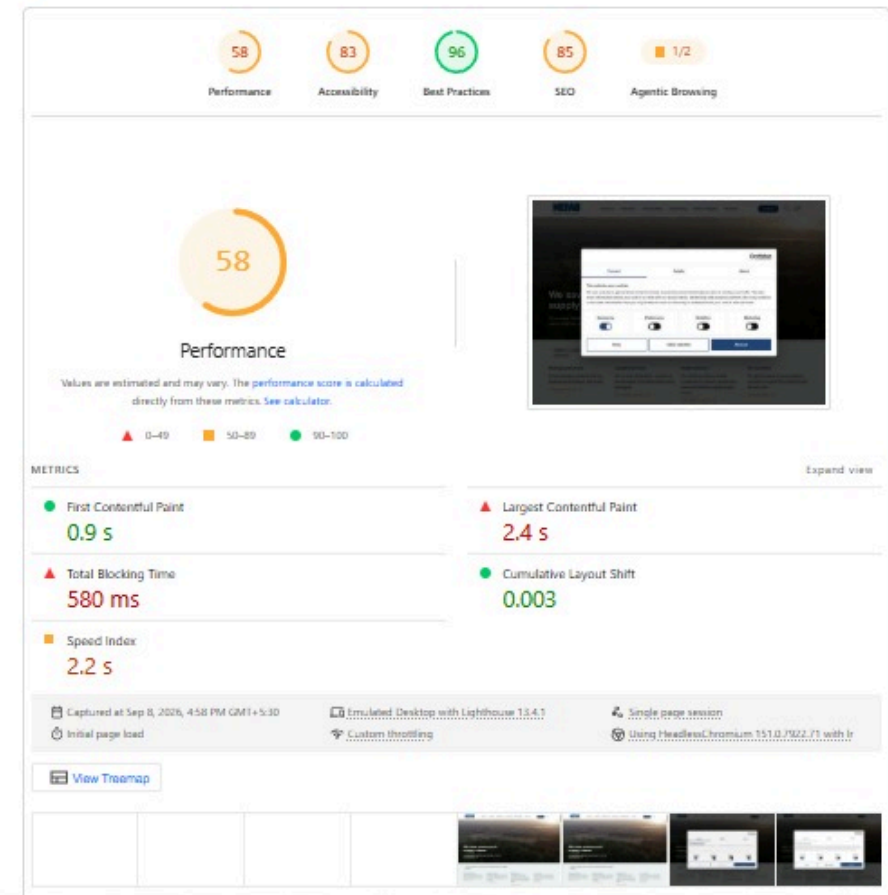

<https://www.nefab.com/> [Analyze](#)

Mobile Desktop

Discover what your real users are experiencing [This URL](#) [Origin](#)

Diagnose performance issues

Nefab Comparison: Faster but also has room for improvement

Nefab scores 58/100 on Desktop Performance with a Speed Index of 2.2s (vs Econovus's 9.3s). Their FCP is 0.9s (vs 1.2s). While Nefab isn't perfect, they are significantly faster — and more importantly, their architecture (custom-built, optimized) allows for improvement. Econovus's WordPress/Elementor stack has a hard performance ceiling.

Design & UX Problems — Systemic Failures

Beyond individual section issues, there are systemic design failures that collectively undermine the brand:

A. WordPress/Elementor Template Limitations

The site is built on the **Astra Theme + Elementor**. This produces recognizable, generic layouts. For a company competing against Nefab (a global enterprise with a custom digital presence), this is a fundamental credibility gap.

B. Inconsistent Visual Language

- **Mixed imagery styles:** Cartoon illustrations in Solutions, dark photography in Hero, YouTube thumbnails in Sustainability — no unified art direction.
- **Inconsistent color application:** Brand green (#0e793d) used for backgrounds, text, buttons, and icons without clear hierarchy.
- **Varying button styles:** Some filled, some outlined, different border radiuses — all on the same page.

C. Zero Micro-Animations & Interactivity

Completely static — no scroll-triggered animations, no hover effects, no parallax, no animated counters. Modern enterprise sites feel "**alive**" and responsive to interaction.

D. Missing Critical Pages

Current site has only 7 nav items. The brief calls for **12 dedicated pages**: Industries Served, Case Studies, Gallery, Blog/News. Essential for B2B buyer research, thought leadership, and industry-specific user journeys.

E. No Industry-Specific User Journeys

A Defence procurement officer and a Renewable Energy supply chain manager have fundamentally different needs. The current site gives them the same generic experience — no segmentation, no tailored content, no targeted CTAs.

Competitor Benchmark — The Nefab Standard

Per the brief, **Nefab (nefab.com)** is the explicit benchmark. Below are actual screenshots alongside analysis.

5.1 – Nefab Hero Section

Benchmark — Nefab Hero (nefab.com)

LIB & E-MOBILITY

DATACOM AND CLOUD

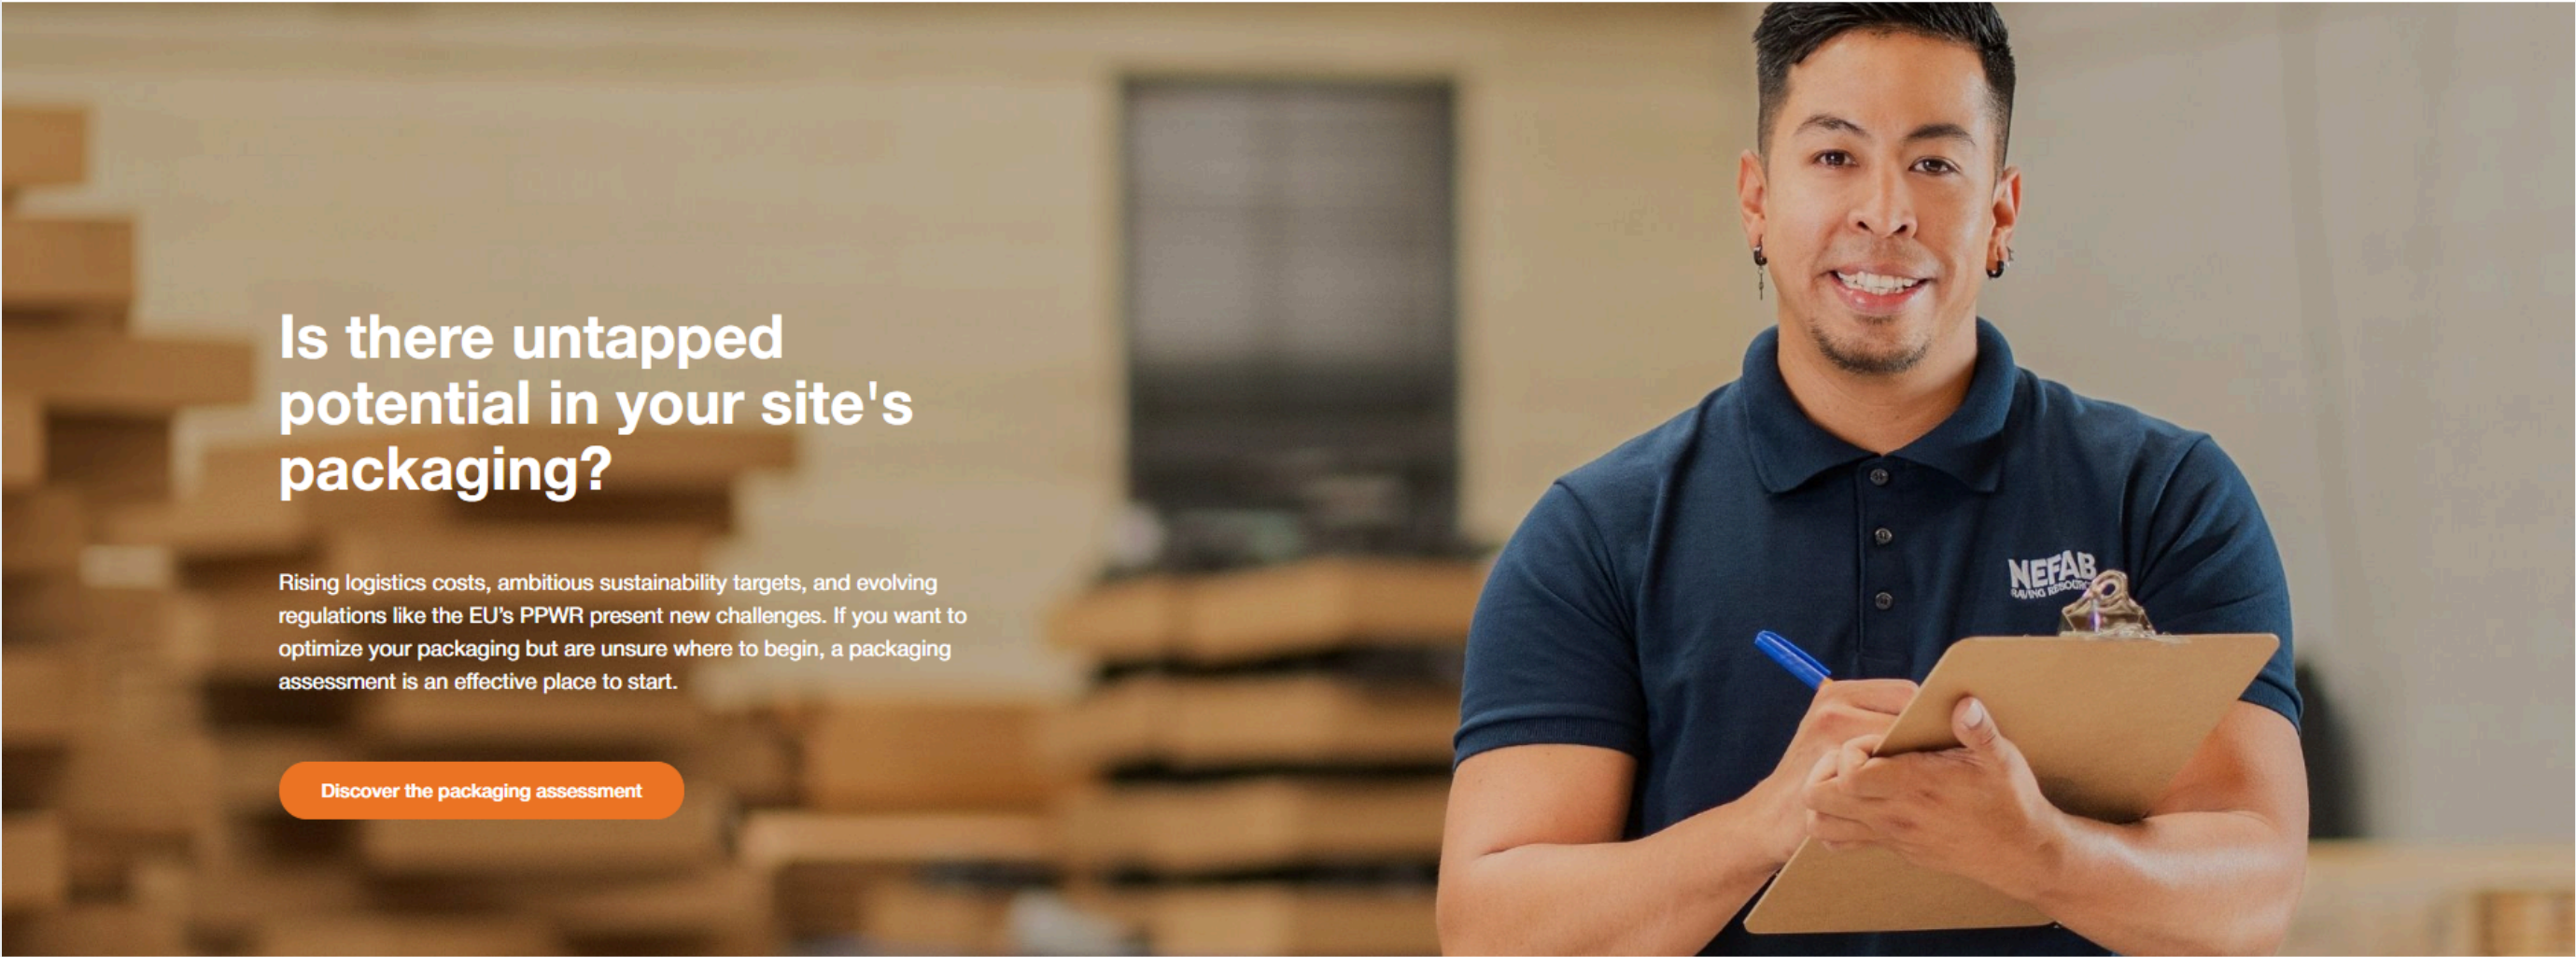

TELECOM

6

"Sustainable packaging solutions for your industry"

Dedicated visual cards for LIB & E-Mobility, Datacom and Cloud, Telecom — each with premium industry photography. Users immediately find content relevant to their sector. Econovus has no equivalent.

5.3 — Premium CTA & Engagement Sections

Is there untapped potential in your site's packaging?

Rising logistics costs, ambitious sustainability targets, and evolving regulations like the EU's PPWR present new challenges. If you want to optimize your packaging but are unsure where to begin, a packaging assessment is an effective place to start.

Discover the packaging assessment

Consultative CTA: "Is there untapped potential in your site's packaging?"

Instead of a generic "Contact Us," Nefab uses consultative, value-driven CTAs. "Discover the packaging assessment" — this positions them as advisors, not vendors. Premium full-bleed photography of a branded Nefab employee adds trust.

5.4 — Sustainability Leadership

Sustainability Report 2025

2025 marked a year of accelerated action and increasing expectations for sustainable business. In this Sustainability Report, Nefab outlines how we are responding to these expectations by embedding sustainability deeper into our strategy, operations, and customer solutions.

[Read our 2025 Sustainability Report](#)

Published Sustainability Report with Cinematic Imagery

A dedicated section promoting their 2025 Sustainability Report with an aerial photograph of a container ship. This positions sustainability as core strategy, not a checkbox. Econovus (India's first carbon-neutral packaging company) should be leading on this — yet it's barely visible on the current site.

Nefab — Dedicated report, cinematic photography

Performance Scores

Metric	Econovus (Desktop)	Nefab (Desktop)
Performance Score	50/100	58/100
First Contentful Paint	1.2s	0.9s
Speed Index	9.3s	2.2s

Metric	Econovus (Desktop)	Nefab (Desktop)
Total Blocking Time	820ms	580ms
Best Practices	73	96

Key Takeaway

The gap is not cosmetic — it's a fundamental difference in how the brand presents itself to enterprise buyers. Nefab is **4x faster** on Speed Index. Their architecture is purpose-built for scale. Closing this gap requires abandoning templates entirely and building a custom web platform.

Proposed Technology Stack & Architecture

To achieve a global-standard digital presence, we recommend migrating from WordPress to a modern, headless architecture:

FRONTEND

Next.js + React.js

Server-Side Rendering, sub-second load times, perfect accessibility

STYLING & MOTION

Tailwind CSS + GSAP

Premium 3D animations, scroll effects, micro-interactions

BACKEND

Node.js + Express.js

Lightweight, scalable API layer for all services

DATABASE & HOSTING

Vercel & GitHub

Edge deployment network and Git-based version control

CMS

Custom Admin Panel

Tailored content management — zero WordPress bloat

AI CHATBOT

LangChain + LLM API

RAG-based Q&A, intelligent lead capture, 24/7 support

Hosting Architecture

- **Frontend:** Vercel — Global edge network for sub-second page loads worldwide
- **Backend & Database:** AWS / DigitalOcean VPS — Secure, scalable infrastructure
- **CDN:** Vercel Edge Network — DDoS protection, image optimization, global caching

Expected Performance Improvements

Metric	Current (WordPress)	Projected (Next.js)	Improvement
Performance Score	50/100	90+/100	+80%
Speed Index (Desktop)	9.3s	<2.0s	4.5x faster
Mobile Speed Index	32.6s	<4.0s	8x faster
Total Blocking Time	820ms	<100ms	8x better
Core Web Vitals	FAILED	PASSED	Enhanced Trust
